

Normality check: histogram vs normal curve

seconds vs px².

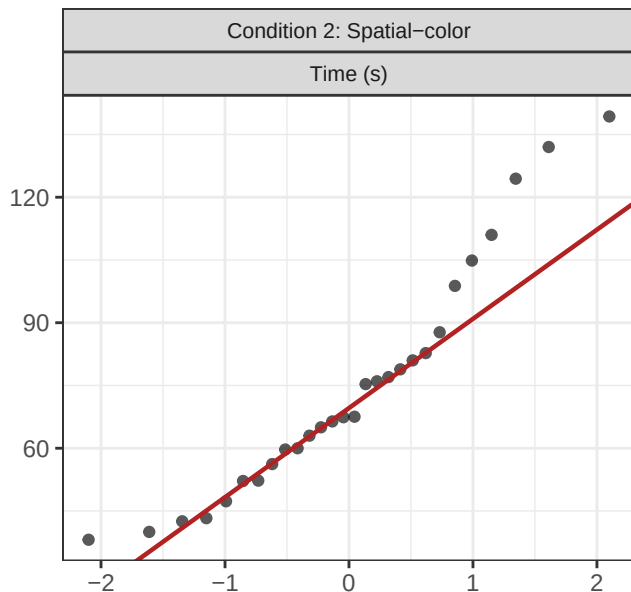

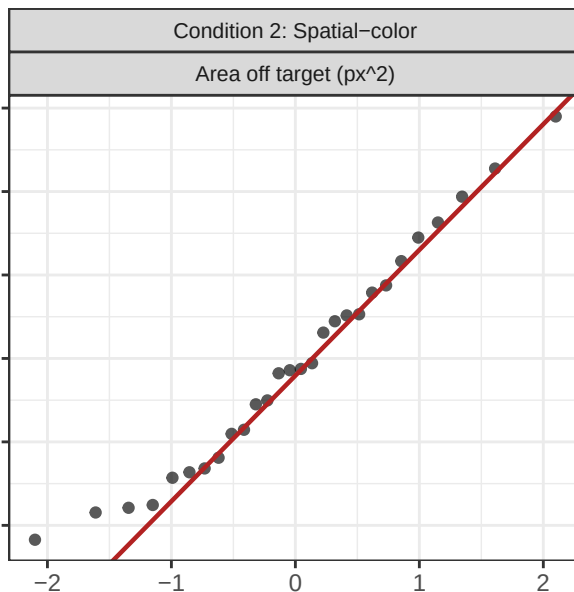

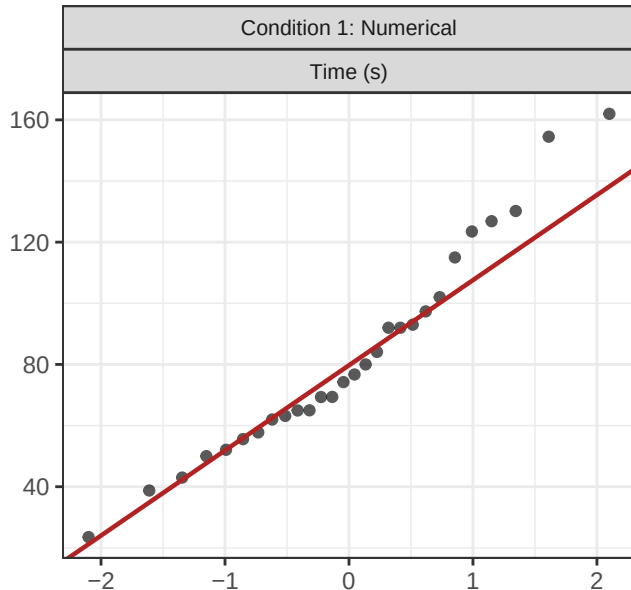

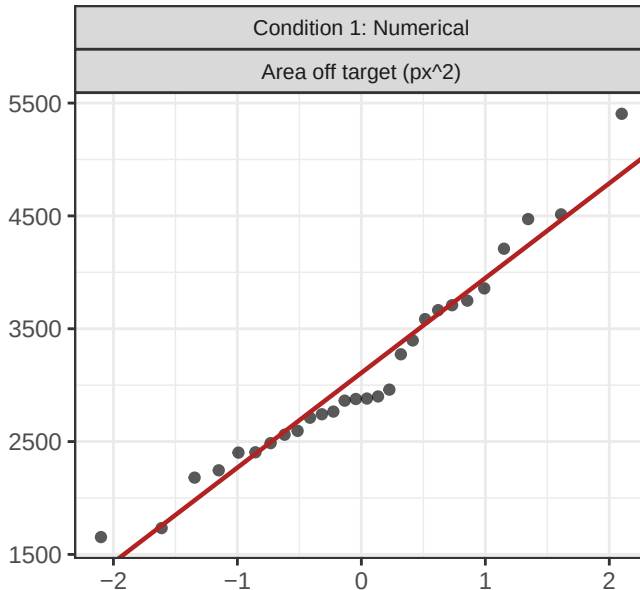

Density

Q-Q plots by condition and outcome

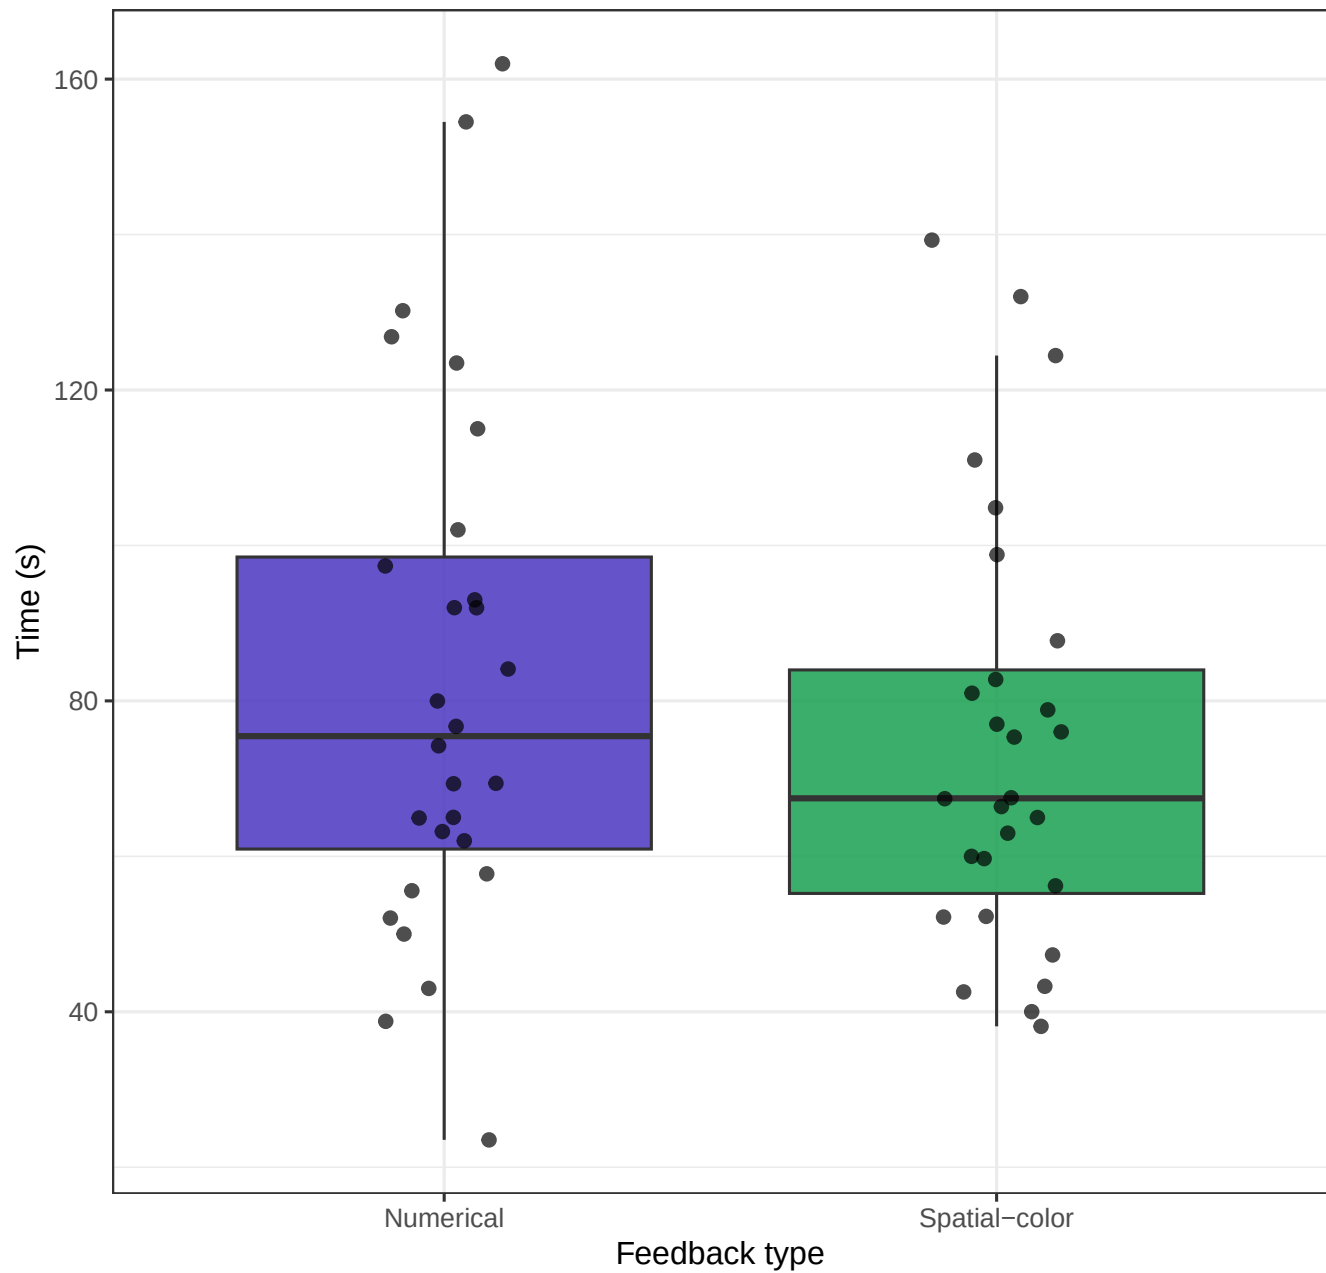

Linear relation means normality

Sample quantiles

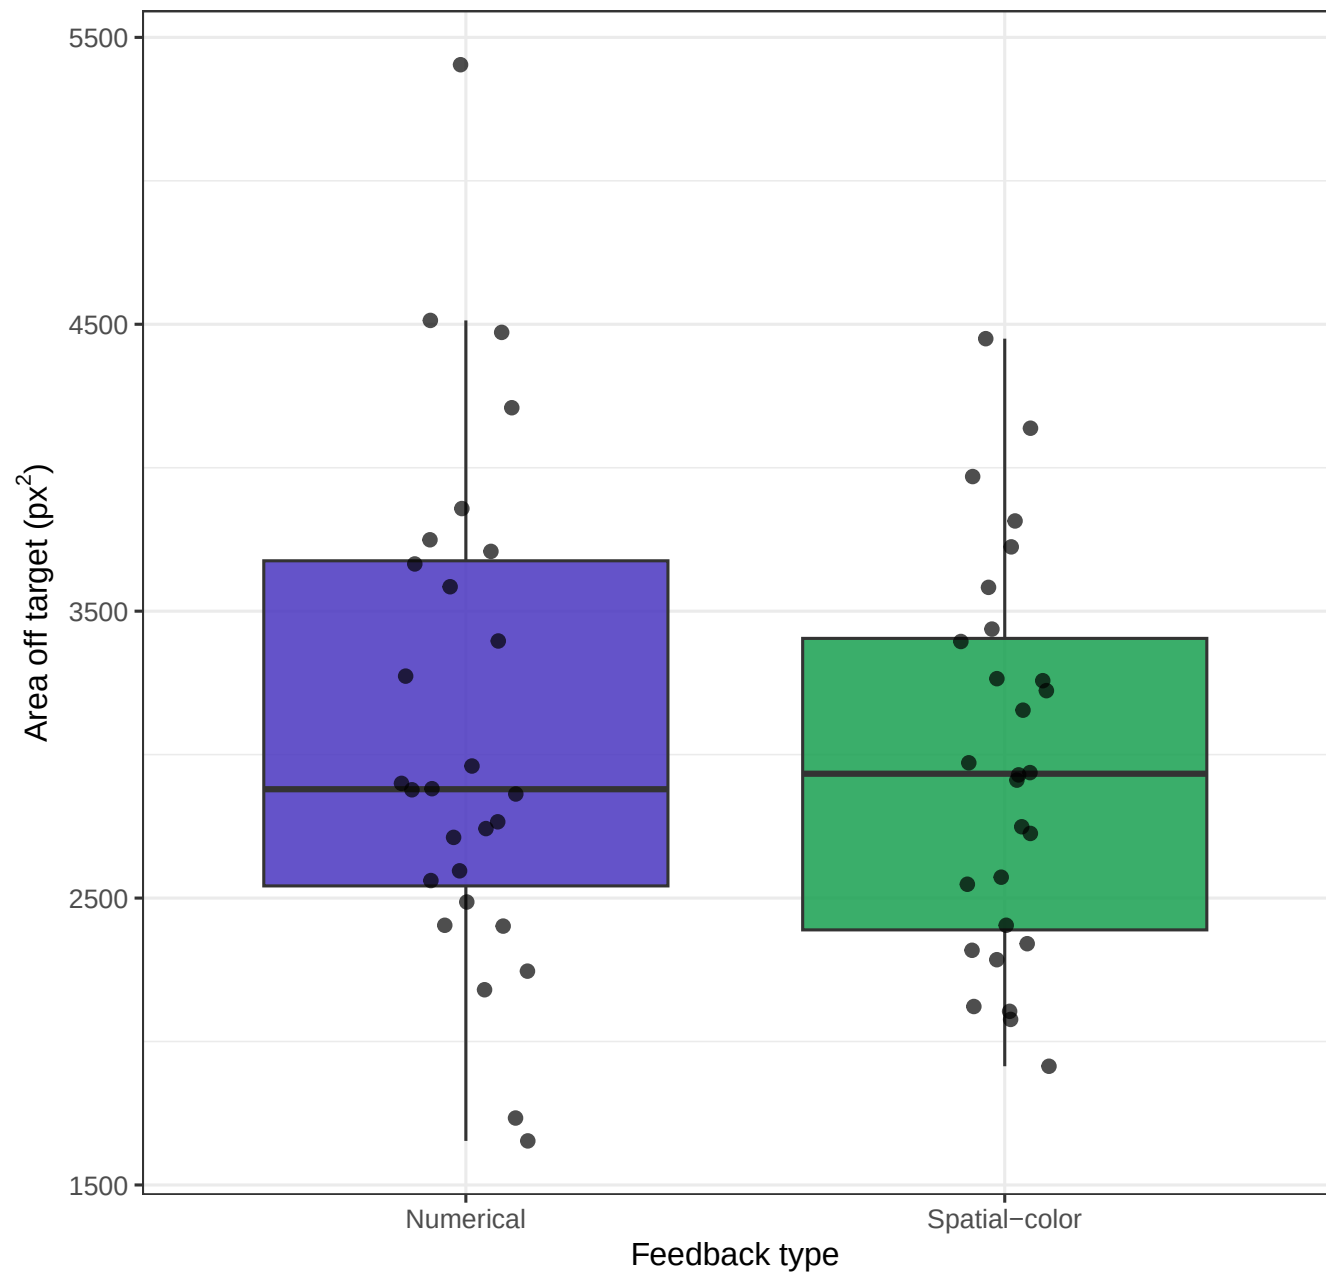

Theoretical quantiles

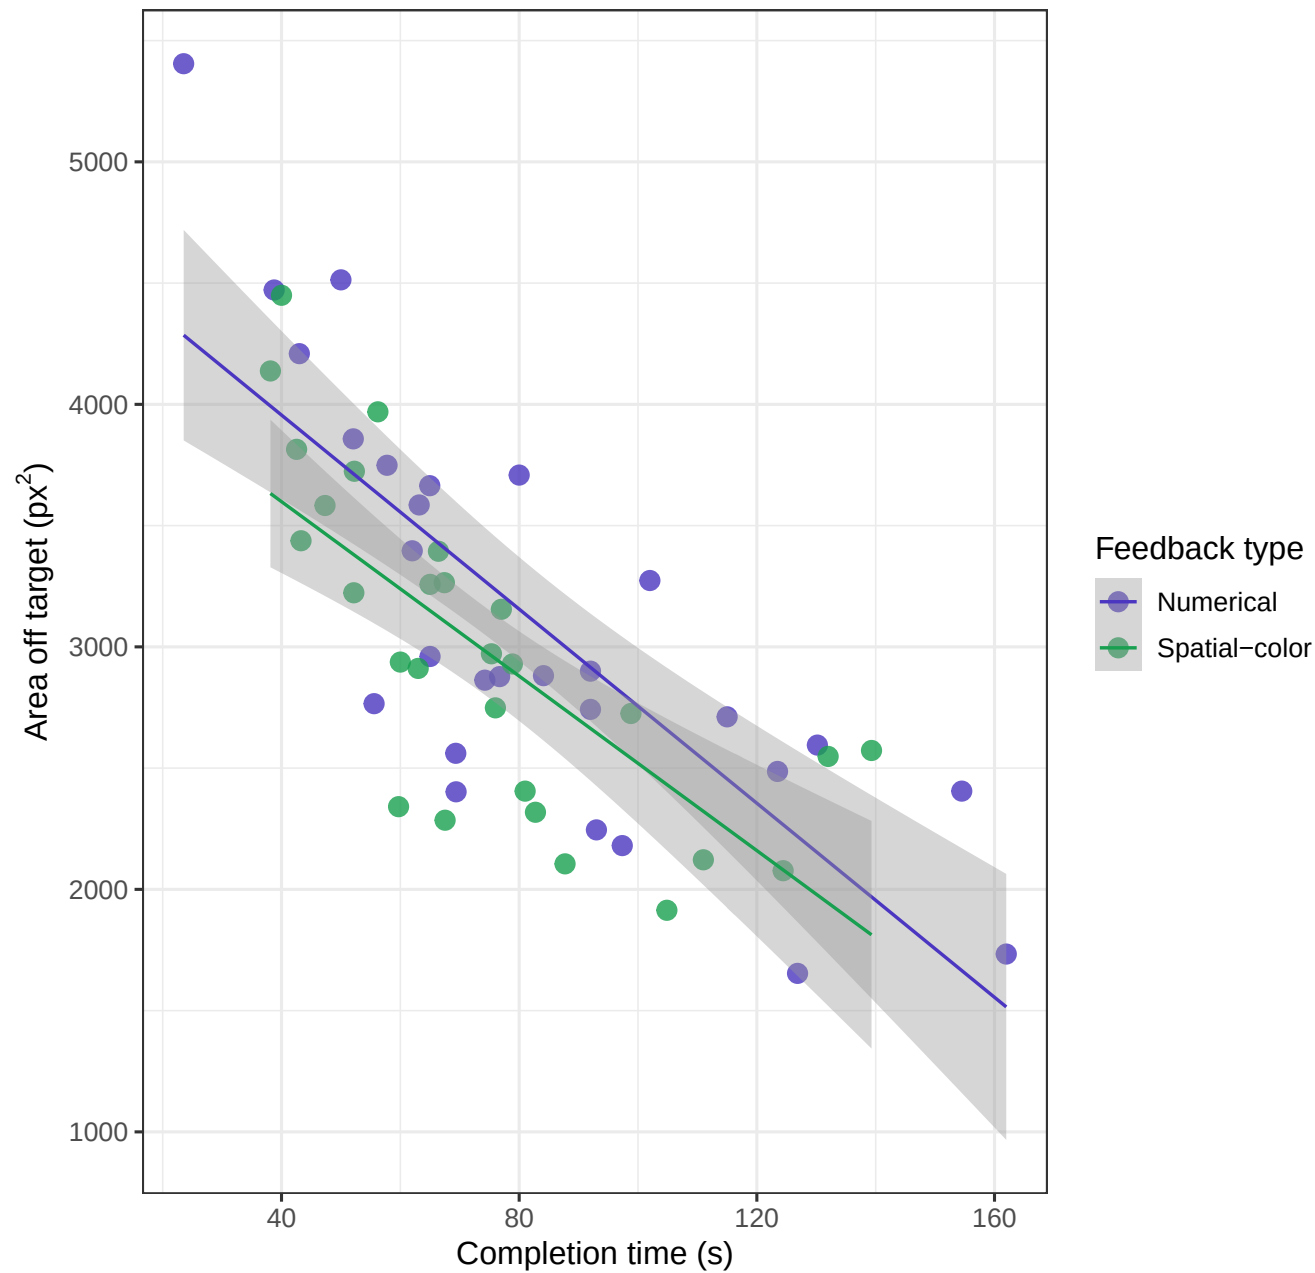

Completion time by feedback type

Accuracy: area off target curve (lower = better)

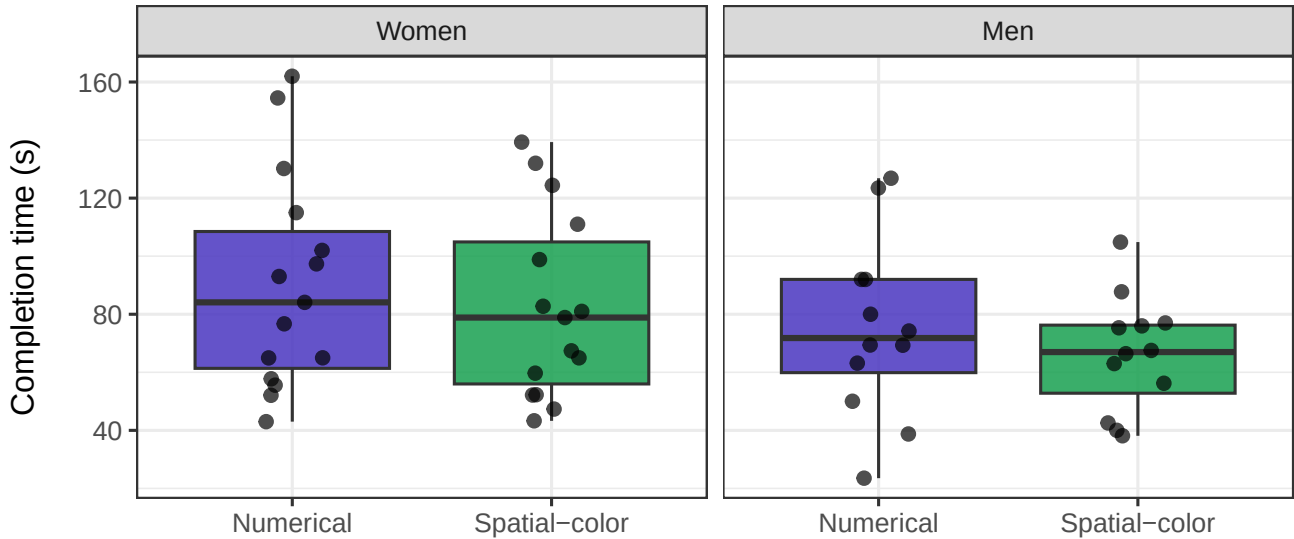

Speed vs trace error (area off target)

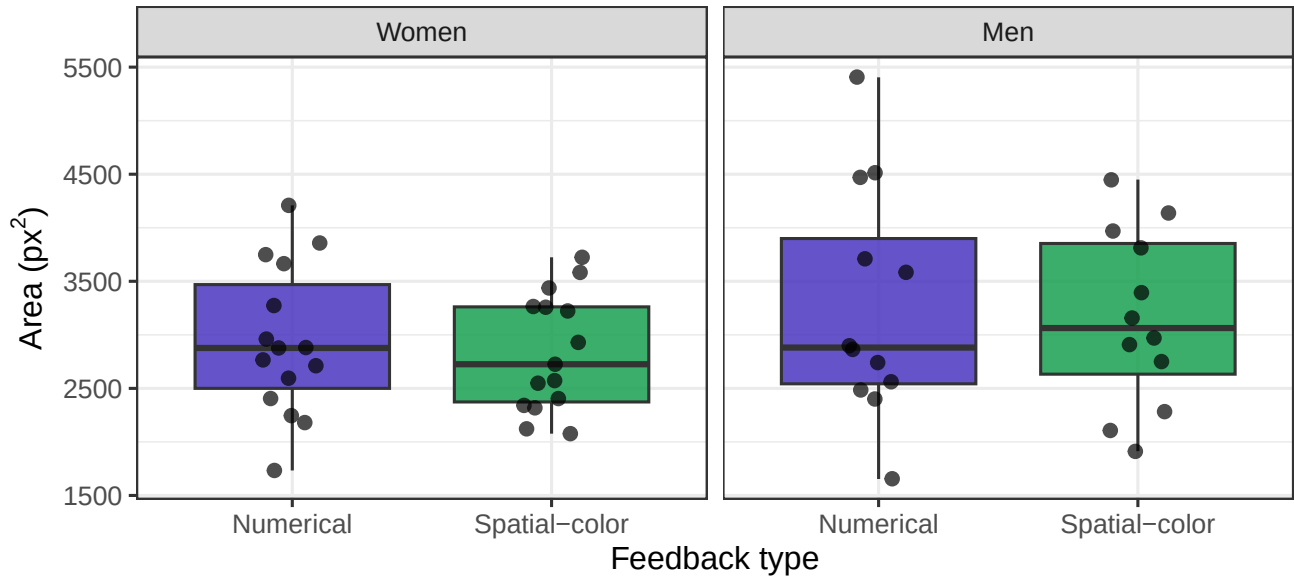

Feedback type: time and accuracy (Women vs Men)

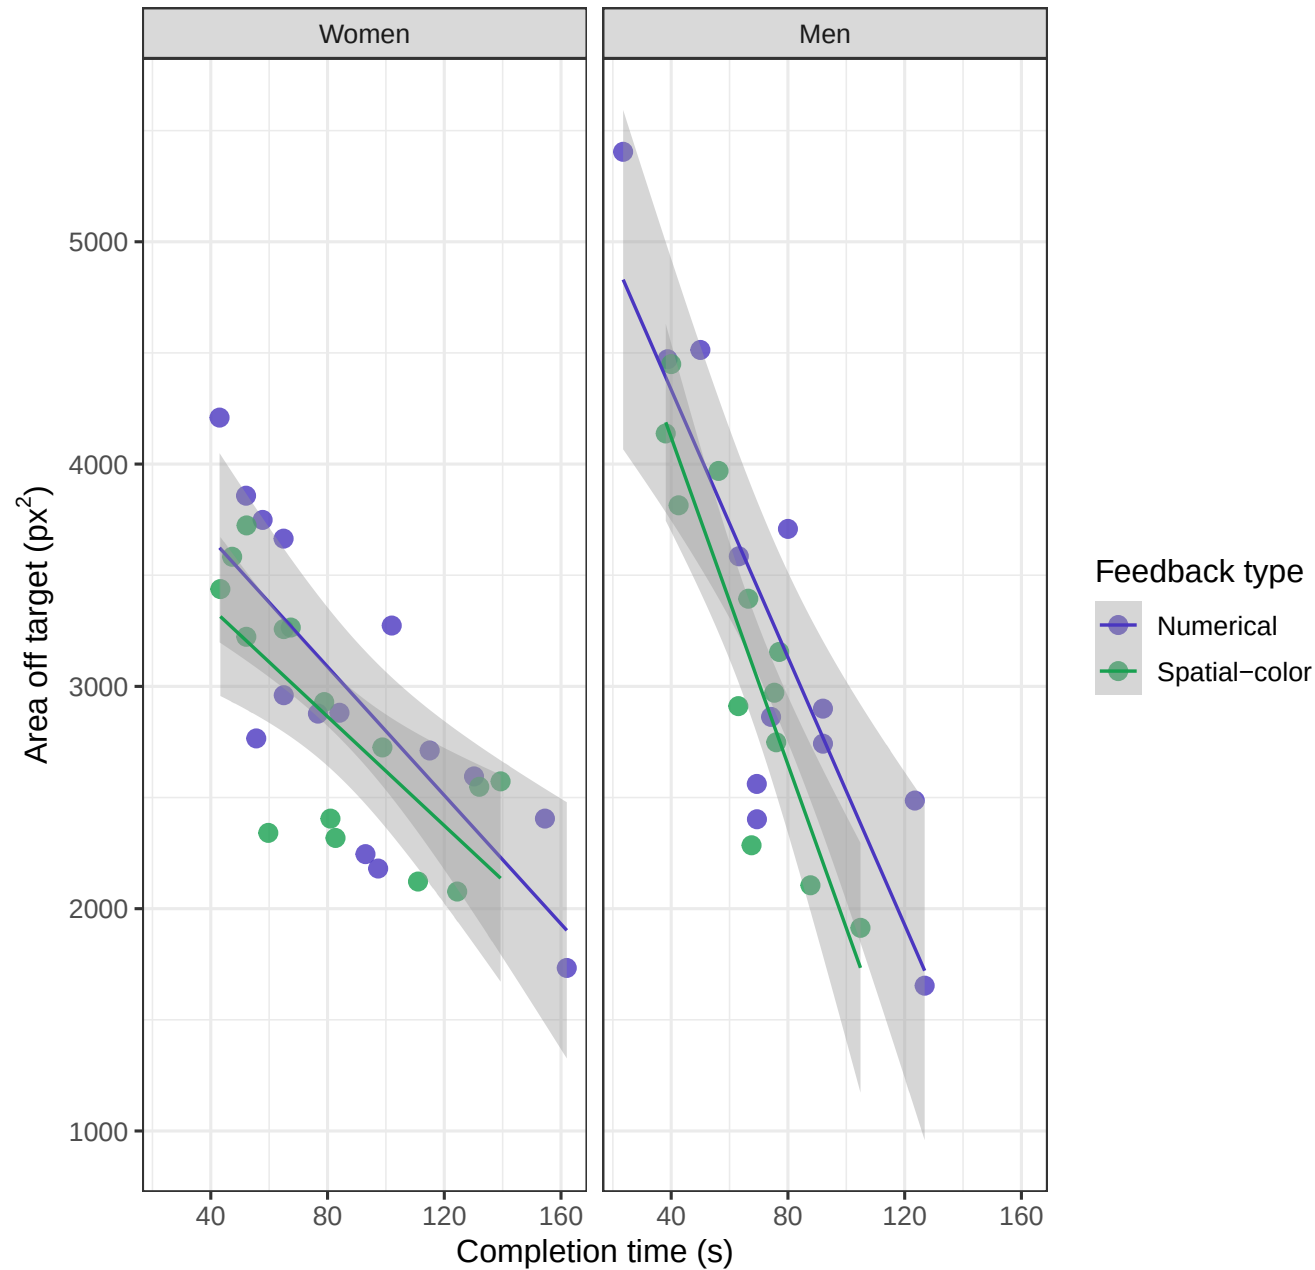

Time (s)

Area off target

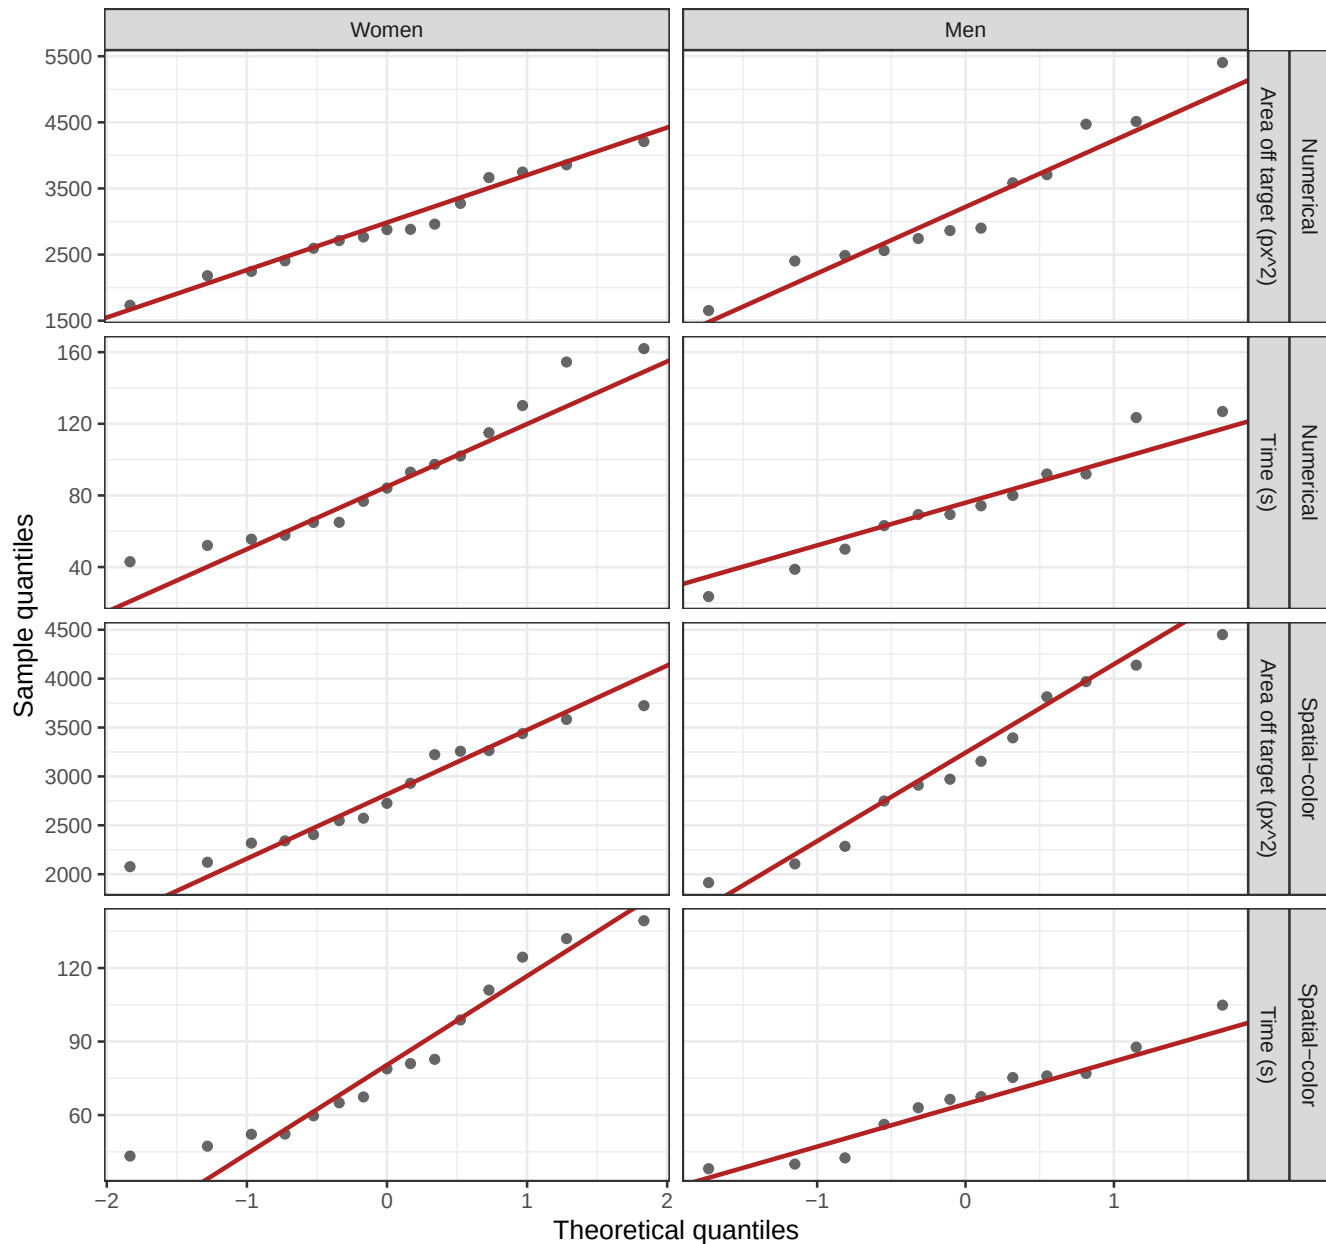

Speed vs trace error (split by gender)

Q-Q plots by gender (normality within subgroup)

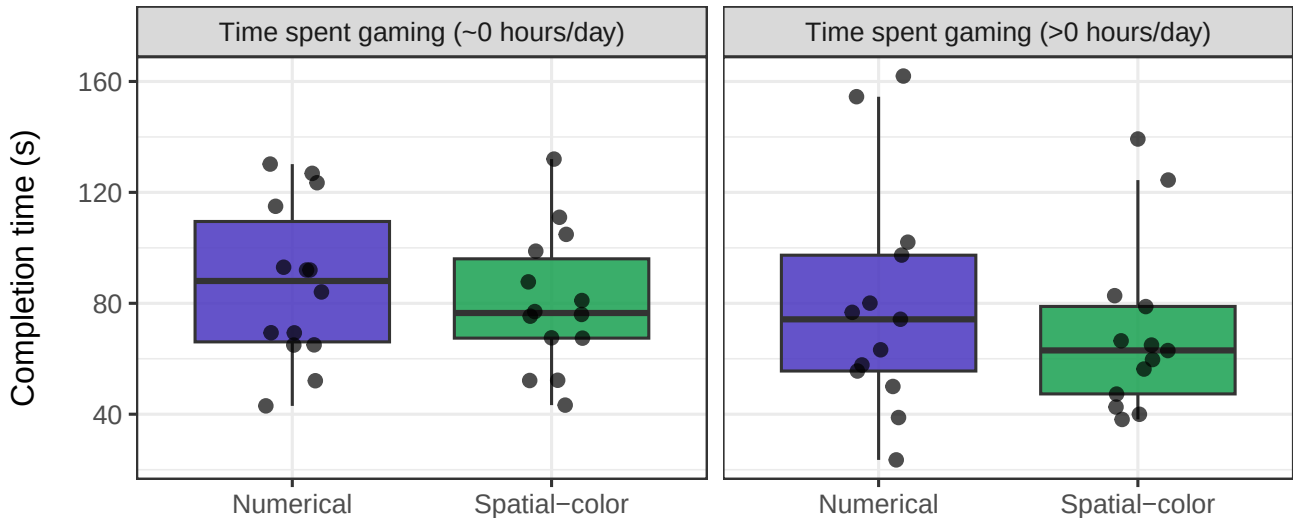

Rows: feedback type and outcome; columns: Women vs Men

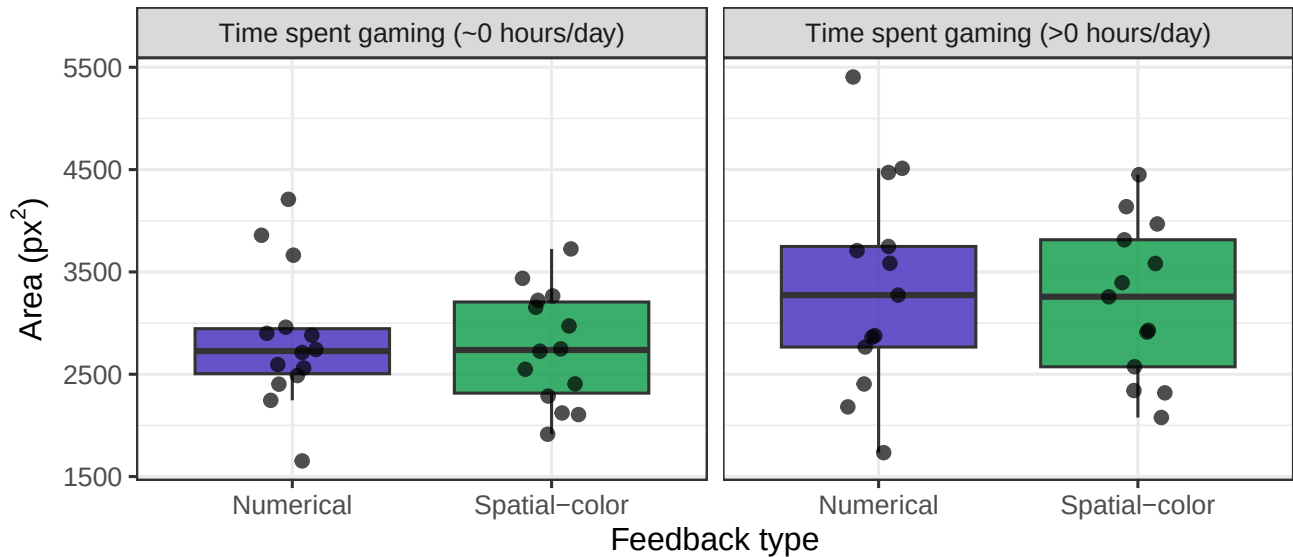

Feedback type: time and accuracy (gaming vs non-gaming groups)

Self-reported typical hours playing games per day

Time (s)

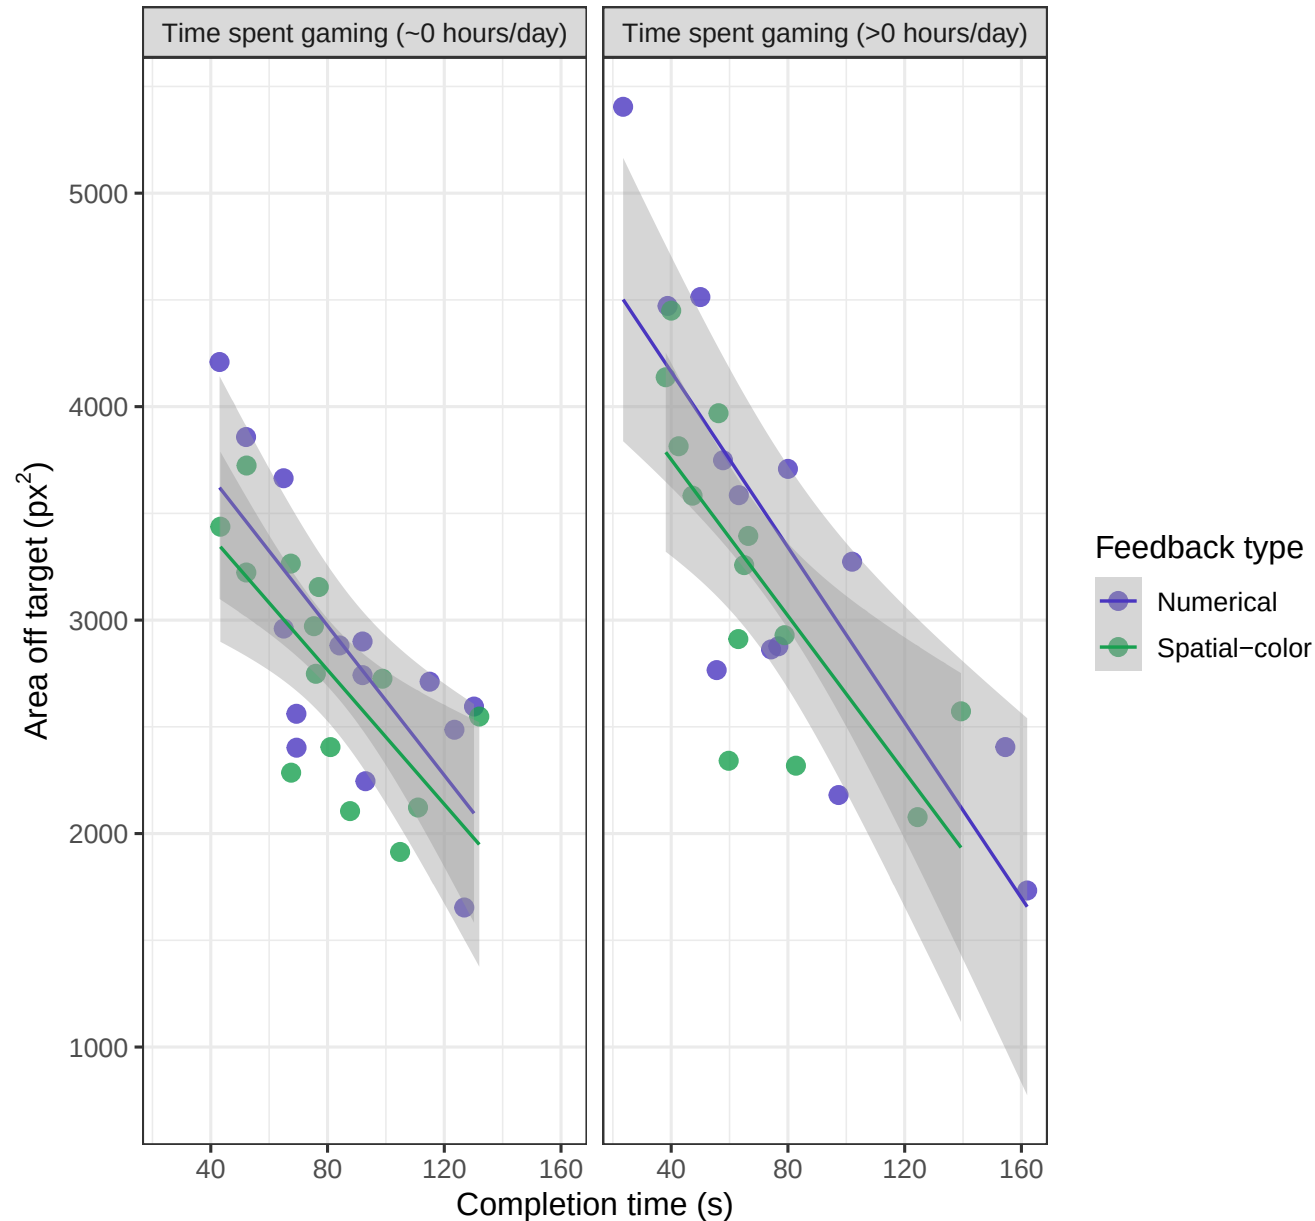

Area off target

Speed vs trace error (split by daily gaming hours)

Self-reported typical hours playing games per day

Q-Q plots by gaming group (normality within subgroup)
 Median split on self-reported h/day; rows: feedback type and outcome
